PRODUCTION SITE

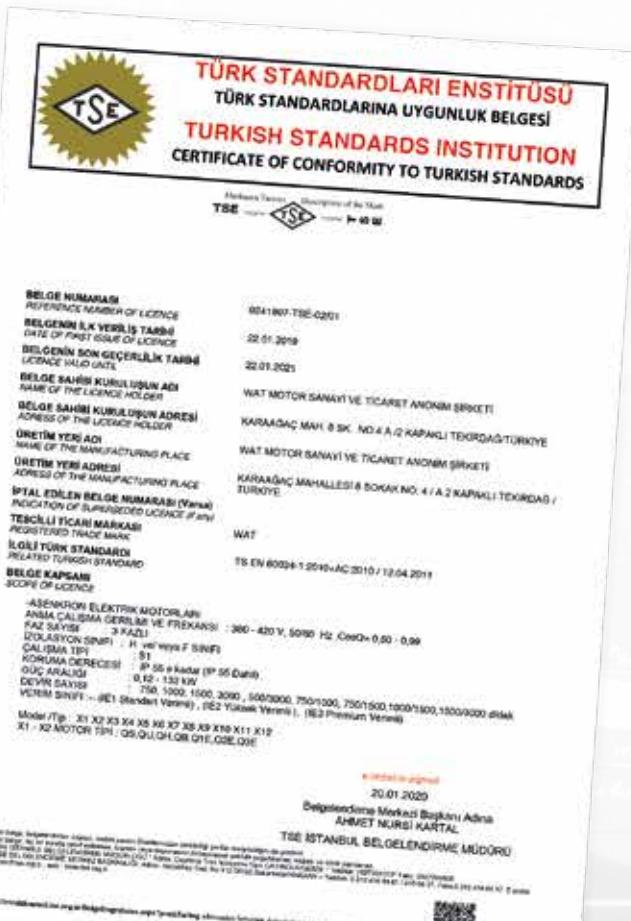

WAT Motor Sanayi ve Ticaret A.Ş. performs manufacturing operations at its factory in Çerkezköy, Tekirdağ. WAT Motor Sanayi ve Ticaret A.Ş. manufactures various kinds of three phase and single phase motors with up to date technology in a closed area of 20.000m².

With a team of engineers, expert on electrical motors, the plant provides the users with necessary technical consultancy services, and offers a product range including three-phase asynchronous motors in 20.000 different versions and single-phase asynchronous motors in 500 different versions.

With the purpose of launching products beyond customer expectations, new technologies are closely followed and adapted in the plant. To convey product design into the production lines more quickly computer assisted production technology and concurrent engineering methods are being used.

WAT Motor Sanayi ve Ticaret A.Ş., exporting more than half of its production and whose products are preferred abroad, expand its customer portfolio via constant and competitive quality policies. Continuous follow-up customer demands and complaints is considered main instrument for product development and customer satisfaction. Thanks to the advantage of long term relationships with customers-producers and dealers, the plant increases competitive power for both itself and the customers.

TECHNICAL DOCUMENTATION

TECHNICAL DOCUMENTATION

INTERNATIONAL STANDARDS

Electric motors are manufactured according to the international standards listed below:

IEC 60034-1	Rating and performance
IEC 60034-2-1	Methods for determining losses and efficiency
IEC 60034-5	Classification of degrees of protection
IEC 60034-6	Methods of cooling
IEC 60034-7	Symbols of construction and mounting arrangements
IEC 60034-8	Terminal markings and direction of rotation
IEC 60034-9	Noise limits
IEC 60034-11	Built-in thermal protection
IEC 60034-14	Vibration limits
IEC 60034-18-1	Functional evaluation of insulation system
IEC 60034-30	Efficiency classes (IE-code)
IEC 60038	Standard voltages
IEC 60072	Dimensions and output series for rotating electrical machines
EN 50347	Dimensions and output for electrical machines

EN 55014-1	
EN 61000-3-2	
EN 61000-3-3	Electromagnetic compatibility

Turkey	Germany	Great Britain
TSE EN 60034-1	DIN VDE 0530	BS EN 60034
	DIN EN 60034	

Three phase and single phase motor series are complying with UL Efficiency and are available in our standard motor range. Those motors are marked with our certification number E235514 upon request.

Safety certification is the process of assessing the compliance of products to recognized safety requirements. Our three phase and single phase motor series are complying with UL Safety. Those motors are marked with our certification number E235514 upon request.

Three phase and single phase motor series are complying with CC Certification and are available in our standard motor range. Those motors are marked with our certification number CC329B upon request.

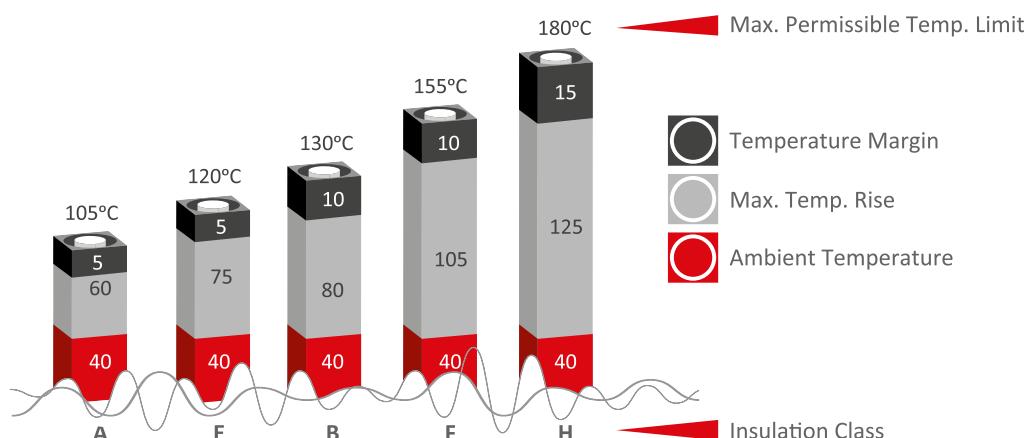

TECHNICAL DOCUMENTATION

INSULATION CLASSIFICATION

Our standard motors have insulation class F while the temperature rise is for Class B ensuring longer service life.

Upon the customer's request, H class insulation motors are manufactured.

Under specified measuring conditions in accordance with IEC 60034-1 standard, insulation class F for an electric motor means that at ambient temperature of 40°C the temperature rise of its windings may be max. 105°C with the additional temperature margin of 10°C.

DEGREE OF PROTECTION

According to IEC 60034-5 standard, electric motors are provided with IP code which determines the degree of protection ensured by the housing against access to dangerous parts, introducing foreign matter and/or water.

Our motors comply with IP55 protection class as standard.

Please ask for other protection classes.

5		5	
IP	The first characteristic numeral: Protection from introduction of solid foreign matter		The second characteristic numeral: Protection against penetration of water and its harmful effects
0	Non-protected machine		Non-protected machine
1	Machine protected against solid objects greater than 50 mm		Machine protected against dripping water
2	Machine protected against solid objects greater than 12 mm		Machine protected against dripping water when tilted up to 15°
3	Machine protected against solid objects greater than 2.5 mm		Machine protected against spraying water
4	Machine protected against solid objects greater than 1 mm		Machine protected against splashing water
5	Dust-protected machine		Machine protected against water jets
6	Dust-tight machines		Machine protected against heavy seas

TECHNICAL DOCUMENTATION

VIBRATION/BALANCING

All rotors are balanced dynamically with half key and this is indicated on the rating plate with letter H.

In accordance to IEC 60034-14, vibration level A is guaranteed for the standard motors. On customer demand, motors with reduced vibration level may also be produced.

Vibration levels with respect to frame size

Vibration Grade	Shaft Height [mm]	56 ≤ H ≤ 132		132 < H ≤ 280		H > 280	
	Mounting	Velocity [mm/s]	Acceleration [m/s ²]	Velocity [mm/s]	Acceleration [m/s ²]	Velocity [mm/s]	Acceleration [m/s ²]
A	Free suspension	1,6	2,5	2,2	3,5	2,8	4,4
B	Free suspension	0,7	1,1	1,1	1,7	1,8	2,8

ENVIRONMENTAL CONDITIONS

Motors are designed to operate at altitudes up to 1000 m and ambient temperature up to 40°C according to IEC 60034-1. Rated output will change at the % ratings given below for different altitudes and ambient temperatures.

ALTITUDE		up to 1000 m	1500 m	2000 m	2500 m	3000 m	3500 m	4000 m
Insulation class	B	100	97	94	90	86	82	77
	F	100	98	95	91	87	83	78

AMBIENT TEMPERATURE		30°C	35°C	40°C	45°C	50°C	55°C	60°C
Insulation class	B	106	106	100	97	92	86	60
	F	105	102	100	97	93	87	82

TECHNICAL DOCUMENTATION

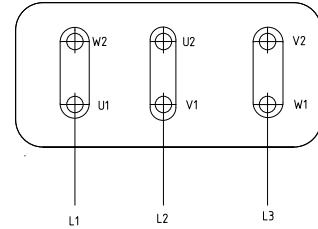

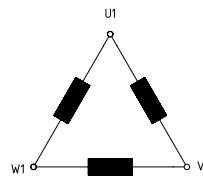

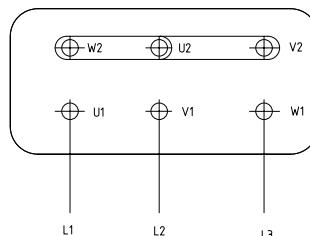

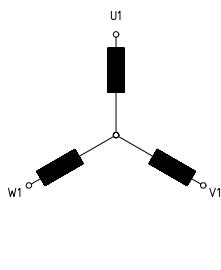

ELECTRICAL CONNECTIONS

Terminal plate has 6 connection terminals marked in accordance with IEC 60034-8.

Motor Type	Frame Size	63-80	90-100	112	132-160	180	200-225	250-280
QE	Cable Entry	M20	M25	M25	M32	M40	M50	M50 / M63[[*]]

QHS	Cable Entry	-	M20	M25	M25	M32	-	-
	Number of Entries	-	1	2	2	2	-	-

*Optional

Standard three-phase motors can be connected with star or delta method.

Star connection is achieved by wiring W2, U2, V2 to each other; and U1, V1, W1 leads to voltage supply

Delta connection is achieved by wiring the end of a phase to the head of the other.

STAR-DELTA (Y/Δ) START-UP

Most low voltage motors are delta wired to operate in 400V and star wired to operate at 690V. This flexibility can also be used to operate the motor under lower voltages. Apart from the fact that startup current in star-delta starting drops to one third of direct starting, startup moment also decreases by around 25%. The motor is started in star connection and accelerated as much as possible, then it is transferred to delta connection. This method can only be used in asynchronous motors which are delta-connected to supply voltage.

VOLTAGE & FREQUENCY

Our motors are normally design for 400V, 50Hz. Other voltages and 60 Hz frequency are optional. Our motors wound for 50Hz can be operated on 60Hz for the same output power. The ratios given below indicate changes in the given parameters.

60 Hz Application Coefficients of 50 Hz Motor								
50 Hz Voltage	60 Hz Voltage	Rated Speed	Rated Power	Rated Torque	Rated Current	Starting Torque	Breakdown Torque	Starting Current
230 V	230 V	1,2	1	0,83	1	0,83	0,83	0,83
230 V	265 V	1,2	1,15	0,96	1	0,96	0,96	0,96
400 V	400 V	1,2	1	0,83	1	0,70	0,83	0,83
400 V	460 V	1,2	1,15	0,96	1	0,95	0,98	0,97

TECHNICAL DOCUMENTATION

TOLERANCES

According to IEC 60034-1, catalogue values are permitted to deviate from the real values as follows:

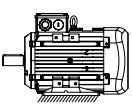

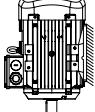

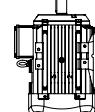

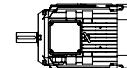

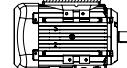

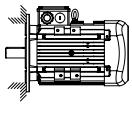

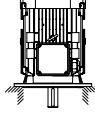

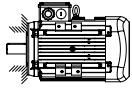

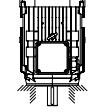

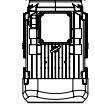

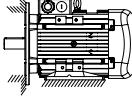

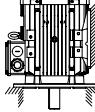

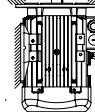

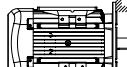

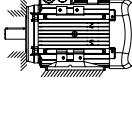

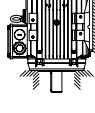

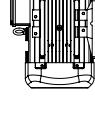

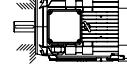

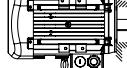

Speed [n]	$\Delta n = \pm 20\%[n_s - n_N]$. $P_N > 1\text{kW}$ $\Delta n = \pm 30\%[n_s - n_N]$. $P_N \leq 1\text{kW}$
Efficiency % [η]	$\Delta \eta = -15\%[100 - \eta_N]$. $P_N \leq 150\text{kW}$ $\Delta \eta = -10\%[100 - \eta_N]$. $P_N > 150\text{kW}$
Power Factor [cos Q]	$\Delta \cos Q = -1/6[1 - \cos Q]$
Locked Rotor Current [I_L/I_N]	$\Delta[I_L/I_N] = +20\%[I_L/I_N]$
Locked Rotor Torque [M_L/M_N]	min $[M_L/M_N] = -15\%[M_L/M_N]$ max $[M_L/M_N] = +25\%[M_L/M_N]$
Breakdown Torque [M_K/M_N]	$\Delta[M_K/M_N] = -10\%[M_K/M_N]$
Pull-up Torque [M_P/M_N]	$\Delta[M_P/M_N] = -15\%[M_P/M_N]$
Moment of Inertia [J] [kgm²]	$\Delta J = \pm 10\%J$
Sound Pressure Level [LPA] [dB]	$\Delta LPA = +3\text{dB}[A]$

BEARING

63-225 frame motors are equipped with deep groove ball bearings with ZZ shields.

250-355 frame size motors have external lubrication.

Please refer to the mechanical dimension section for specific motor data.

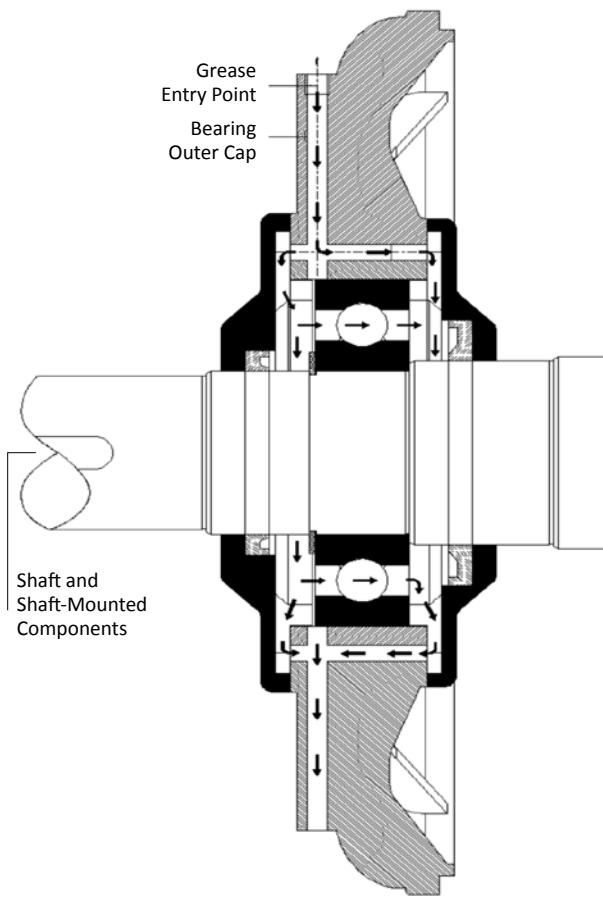

TECHNICAL DOCUMENTATION

LUBRICATION

Closed type (2Z) roller bearings are being used. These types of roller bearings do not require maintenance since they are lubricated with the type of lubricant specified by the manufacturer.

Roller bearings should be replaced after 20,000 hours of operation (approx. 2-5 years of use) due to the specified operation temperature, vibration level and shaft loads.

The grease type and quantity are written on the nameplate for motors that have externally lubricated roller bearings. There are bearing lubrication channel and grease nipple for motors that have externally lubricated bearings. After lubrication, grease nipple cover must be closed. Grease must be avoided from dirt and dust during lubrication. Quantity of grease indicated on the nameplate should be considered and different grease must not be used. The mix of different grease must be avoided.

PAINTING

Our standard range of motors are painted with a grey protective paint according to RAL 7031 (grey). Other paint options are also available on request.

FEET

For 63-200 frame size aluminium motors, feet can be mounted on three sides, allowing terminal box assembly on the desired side. For 63-250 frame size aluminium motors, the feet are detachable and this feature provides flexibility for different mounting types.

TERMINAL BOX

Motors frame size 63-250 have terminal boxes on top situated at drive end which can be rotated 90°, so that conduits can be at each side. For the other frame sizes, it is position on top and situated at the drive end.

DRAIN/CONDENSATION HOLES

In the basic design, motors are supplied without holes. In case of customer requests, motors can be supplied with drain holes. Since these motors are provided with a special plug in the hole, the degree of protection remains IP 55.

	1500	8.49	7.37

Calculations are based on 20.000h (L10aah) bearing life time and the actual values will differ if radial and axial loads act at the same time. Mechanical strength of the end-shields should also be considered for critical applications.

Value of force F_r acting on any point of the shaft end (between points $X=\text{max}$ and $X=0$) may be calculated according to the following formula:

$$F_r = F_{x0} - \frac{x}{E} \times (F_{x0} - F_{xmax}) [\text{kN}]$$

Where; F_{x0} - value of F_r force acting on the beginning of the shaft end

F_{xmax} - value of F_r force acting on the shaft end

E - length of the shaft end

* All calculations are based on floating bearing arrangement for standard (excluding compact & super compact) motors.

TECHNICAL DOCUMENTATION

DUTY TYPE

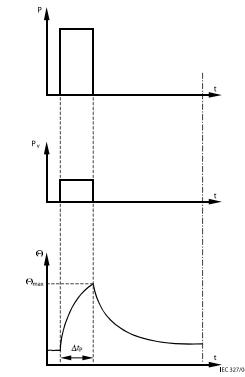

Duty types according to the IEC 60034-1 are given below:

S1: Continuous running duty

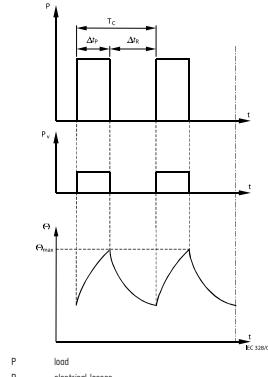

P load
P_v electrical losses
Θ temperature
Θ_{max} maximum temperature attained
t time

S2: Short-time duty

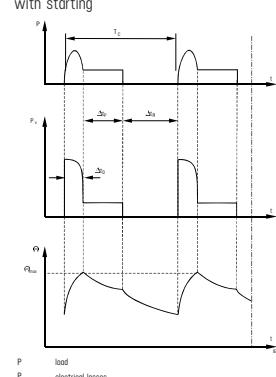

P load
P_v electrical losses
Θ temperature
Θ_{max} maximum temperature attained
t time
t_p operation time at constant load

S3: Intermittent periodic duty

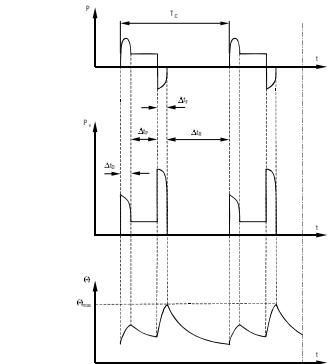

P load
P_v electrical losses
Θ temperature
Θ_{max} maximum temperature attained
t time
T_C time of one load cycle
Δt₀ operation time at constant load
Δt_R time de-energized and at rest

S4: Intermittent periodic duty with starting

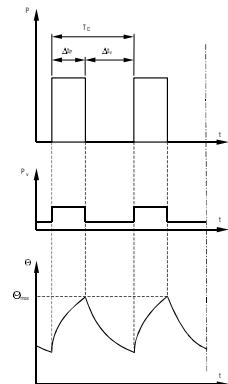

P load
P_v electrical losses
Θ temperature
Θ_{max} maximum temperature attained
t time
T_C time of one load cycle
Δt₀ starting/accelerating time
Δt₀ operation time at constant load
Δt_R time de-energized and at rest

S5: Intermittent periodic duty with electric braking

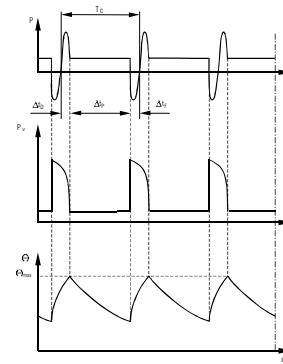

P load
P_v electrical losses
Θ temperature
Θ_{max} maximum temperature attained
t time
T_C time of one load cycle
Δt₀ starting/accelerating time
Δt₀ operation time at constant load
Δt_E time of electric braking
Δt_R time de-energized and at rest

S6: Continuous operation periodic duty

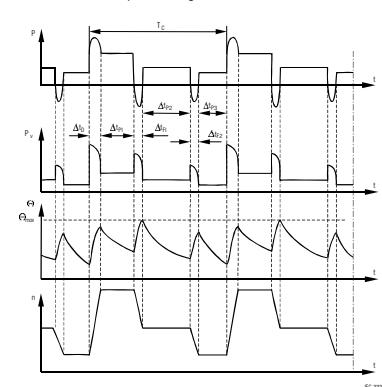

P load
P_v electrical losses
Θ temperature
Θ_{max} maximum temperature attained
t time
T_C time of one load cycle
Δt₀ operation time at constant load
Δt_R operation time at no-load

S7: Continuous operation periodic duty with electric braking

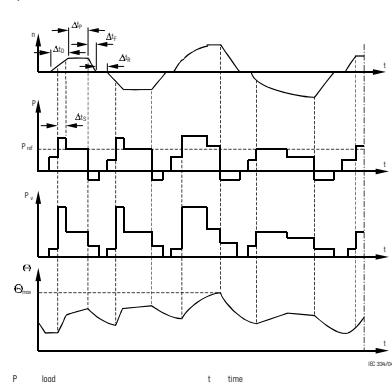

P load
P_v electrical losses
Θ temperature
Θ_{max} maximum temperature attained
t time
T_C time of one load cycle
Δt₀ starting/accelerating time
Δt₀ operation time at constant load
Δt_E time of electric braking

S8: Continuous operation periodic duty with related load/speed changes

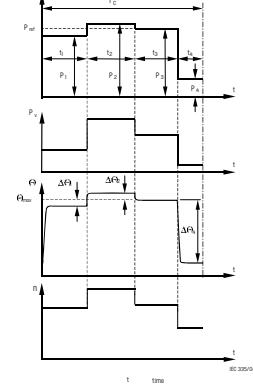

P load
P_v electrical losses
Θ temperature
Θ_{max} maximum temperature attained
n speed
t time
T_C time of one load cycle
Δt₀ starting/accelerating time
Δt₀ operation time at constant load (P1, P2, P3)
Δt_E time of electric braking (F1, F2)

S9: Duty with non-periodic load and speed variations

P load
P_{ref} reference load
P_v electrical losses
Θ temperature
Θ_{max} maximum temperature attained
n speed
t time
t₀ starting/accelerating time
t_f operation time at constant load
t_E time of electric braking
t_R time de-energized and at rest
t_G time under overload

S10: Duty with discrete constant loads and speeds

P load
P_{ref} constant load within a load cycle
P_{ref} reference load based on duty type S1
P_v electrical losses
Θ temperature
Θ_{max} maximum temperature
Θ_{ref} temperature or reference load based on duty type S1
n speed
t time
t_c time of one load cycle
ΔΘ difference between the temperature rise of the winding of each of the various loads within one cycle and the temperature rise based on duty cycle S1 with reference load

The duty type of our standard motors is S1. On customer demand, the other duty type-motors can be produced.

TECHNICAL DOCUMENTATION

INDUCTION MOTORS FED BY INVERTER

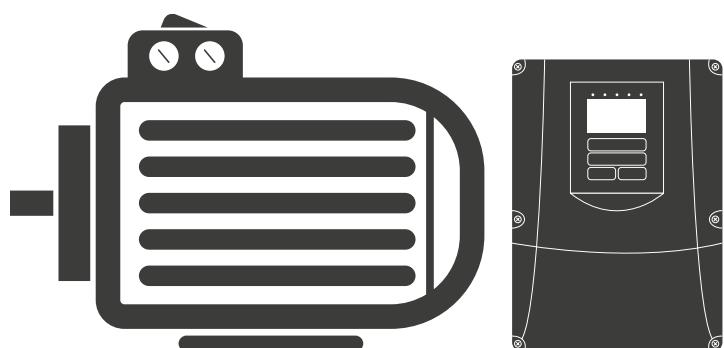

Due to its simple and rugged construction, low cost production and less maintenance requirements, squirrel cage induction motors are the most preferred type of the motor in the industry. In particular, technological developments and cost reduction in power electronics fields and also regulations on energy efficiency especially in HVAC industry, motivate the use of induction machine fed by inverters.

Important issues regarding the motor operation supplied by the inverter are listed below:

- The application should be compatible with the torque-speed curve of the selected motor and also continuous and maximum output current capability of the inverter. Please, get in contact with your inverter supplier regarding the normal duty and heavy duty operation based on your application.
- High switching frequency operation of the inverter imposes voltage stress on motor insulation. Please, get in contact with your motor supplier if your inverter switching frequency is higher than 5 kHz.
- High switching frequency improves the efficiency of the motor and also decreases the noise level, while decreases the inverter efficiency.
- Motor control modes of the inverter (Scalar or Vector) are chosen depending on the applications. Scalar control (U/f) is used mainly in applications like pump and fans where the requirements on speed accuracy and load dynamics, and starting torque are not so strict.

Vector control mode is used mainly in applications, where high starting torque, high accuracy on speed and the fast changes at load, prolonged low speed operation at load are required. Due to the control principle, vector control can provide higher torque for the same motor current and handle dynamic torque changes. In that sense, in case of operation by scalar control mode, inverter with a higher current rating is required, for the same application conditions.

- Beside the efficiency class of the motor, efficient operation of the motor is also dependent on the parameter settings of the inverter. (Motor control modes, switching frequency, braking methods, torque boost in Scalar control have the influence on efficient operation and thermal load of the motor.)
- Control methods used in speed sensor-less vector control may have varying performance, dependent on the motor design. Therefore, although using the same inverter, user may experience different performance at the motors produced by the different manufacturers.
- Identification of the motor equivalent circuit, which is part of the auto-tuning procedure of the inverter, is a critical setting which has influence on torque capability, speed accuracy, low and high speed performance and also efficient operation of the motor.
- Inverter suppliers may have different PWM Modulation methods which has especially influence on noise characteristics of the motor and other characteristics like inverter and motor efficiency and thermal behaviour as well.

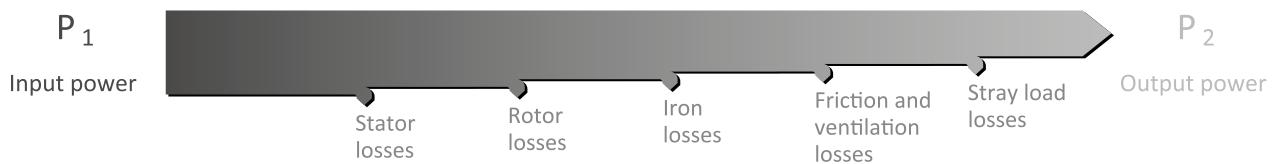

TECHNICAL DOCUMENTATION

EFFICIENCY

European Committee of Manufacturers of Electrical Machines and Power Electronics (CEMEP) and European Commission issued a declaration on June 28, 1999 that categorized the motors in efficiency classes.

This standard covers 2, 4 and 6 pole motors in 0.12kW and 1000kW power range and 50-60Hz frequency and refers to IEC standard 60034-2-1 to define efficiency.

Efficiency is defined as the ratio of output power of the motor to the input power reflected in the cost and it is actually an indicator of losses.

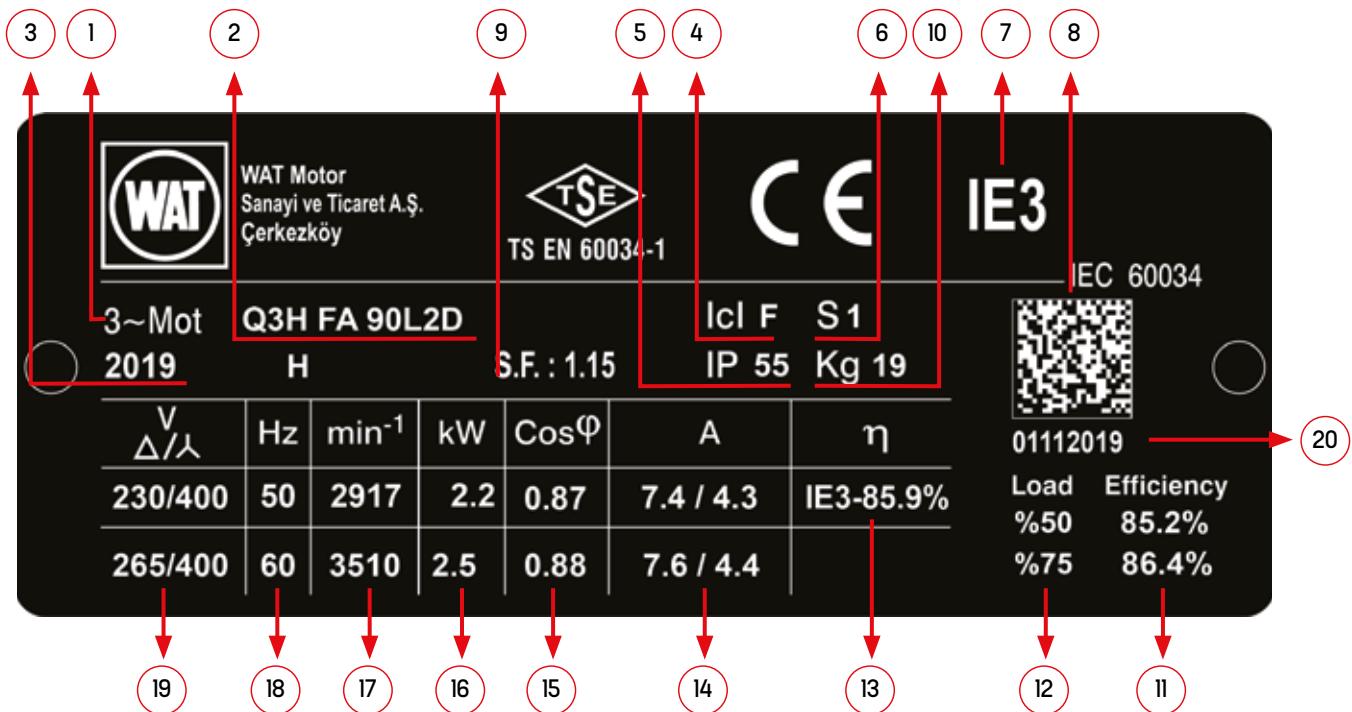

"EU Regulation related to the subject has been issued in June 2009. This regulation focuses on some changes in 60034-30 standard and includes certain obligatory applications.

June 16, 2011	Minimum IE2 efficiency class obligatory
January 1, 2015	Minimum IE3 efficiency class (or IE2+inverter) obligatory (7.5-375kW)
January 1, 2017	Minimum IE3 efficiency class (or IE2+inverter) obligatory (0.75-375kW)

TECHNICAL DOCUMENTATION

According to EC No 640/2009 regulation, motor labels will include 50Hz and 60Hz motor data as well as IE codes and efficiency value. Most prominent feature of new labels is that 2D barcoding will be placed on the labels. This application ensures the customers to track the motors.

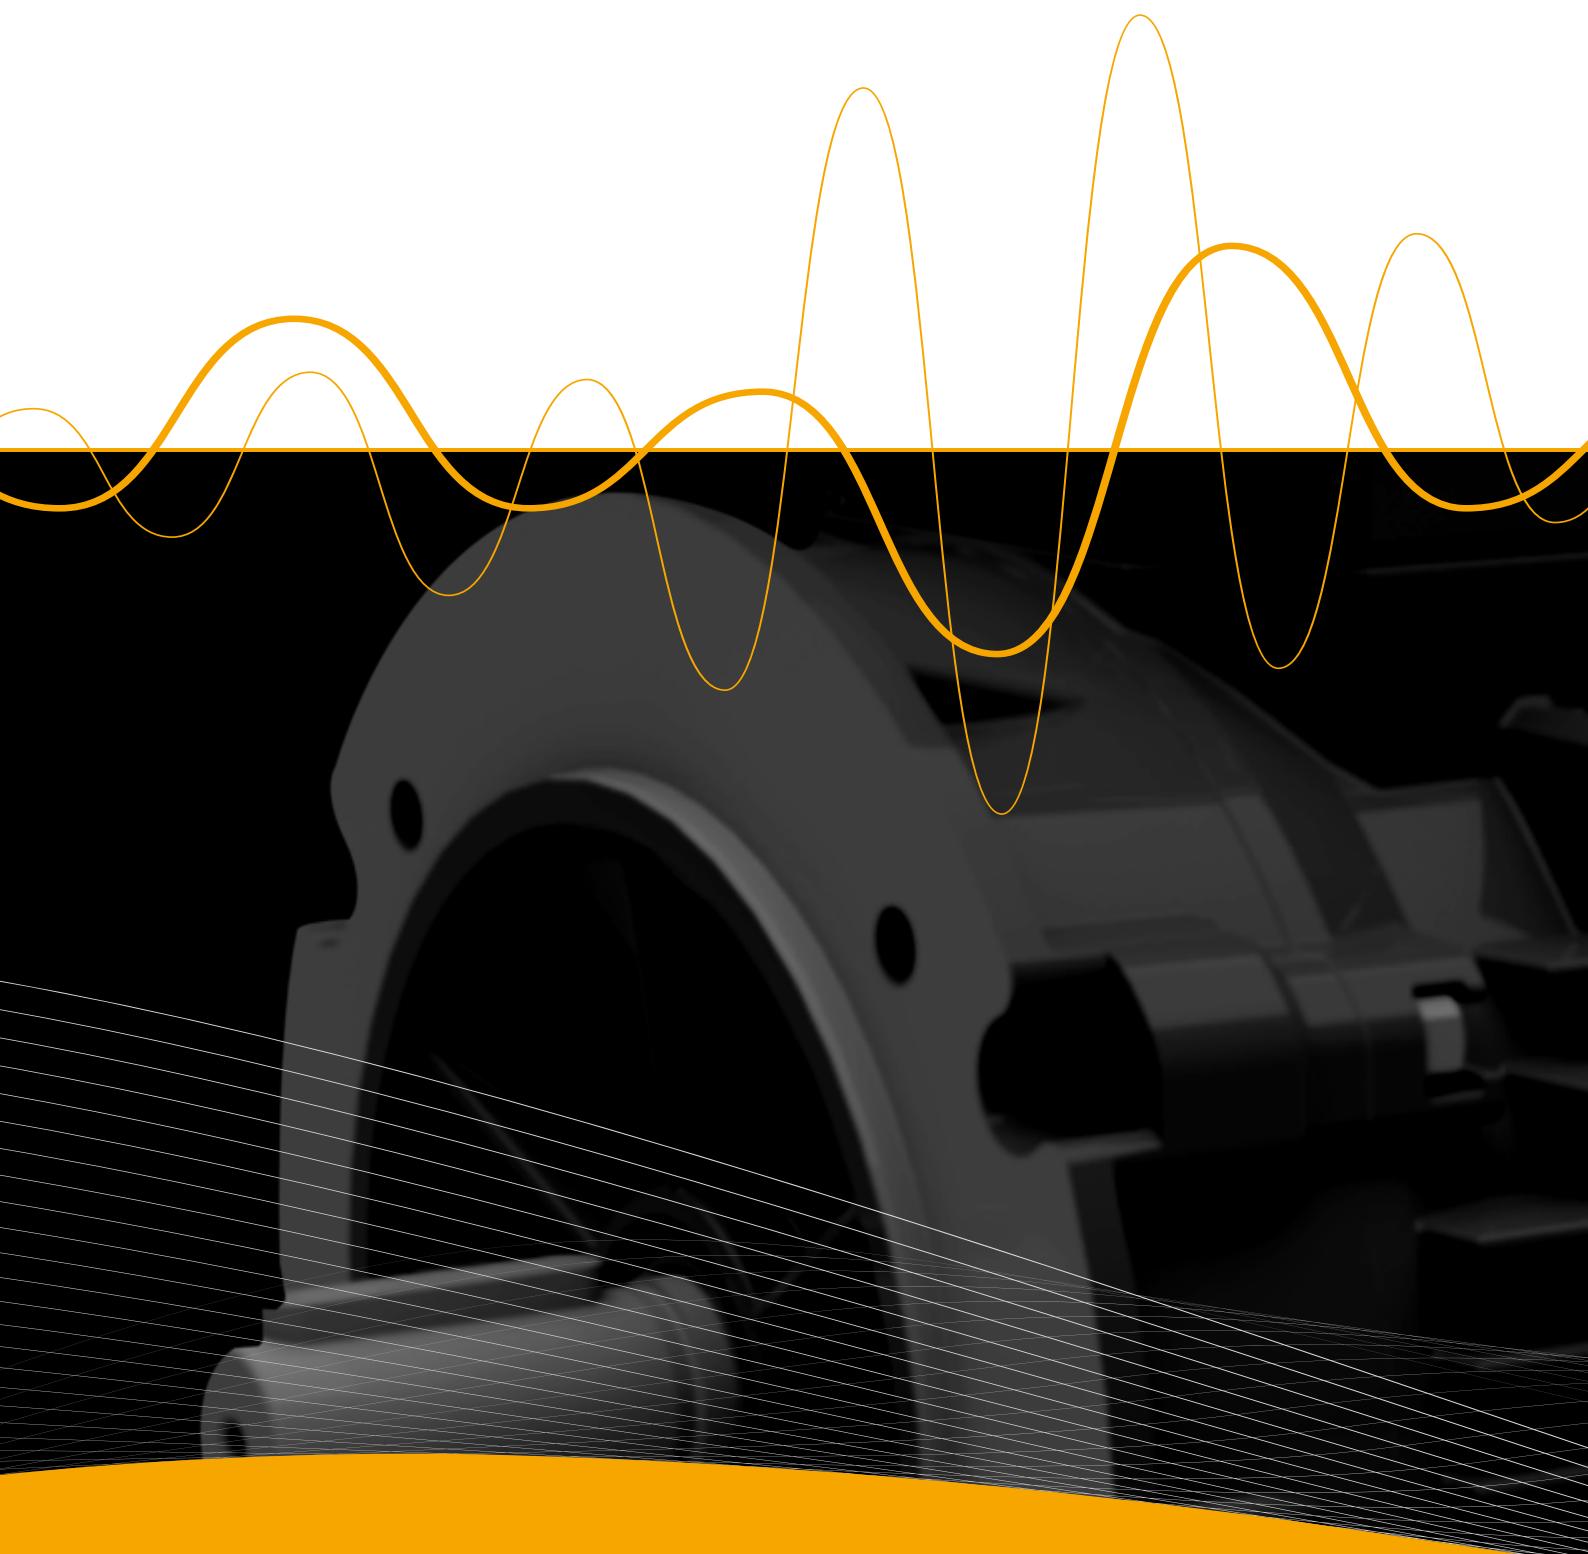

With barcoding, the motor users will be able to reach information such as manufacture date of motor, results of routine testing (current with neutral resistance, power etc.) and serial no. and etc.

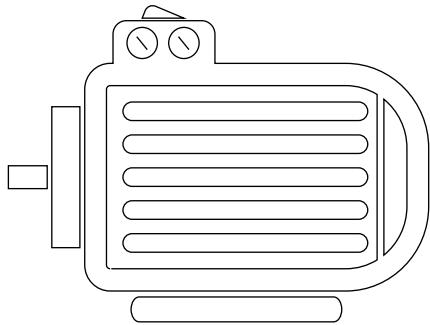

- 1 Motor type
- 2 Motor code
- 3 Year of manufacture
- 4 Insulation class
- 5 IP class
- 6 Service type
- 7 Efficiency class (acc. to IEC 60034-30)
- 8 2D Barcode
- 9 Service factor *
- 10 Motor weight

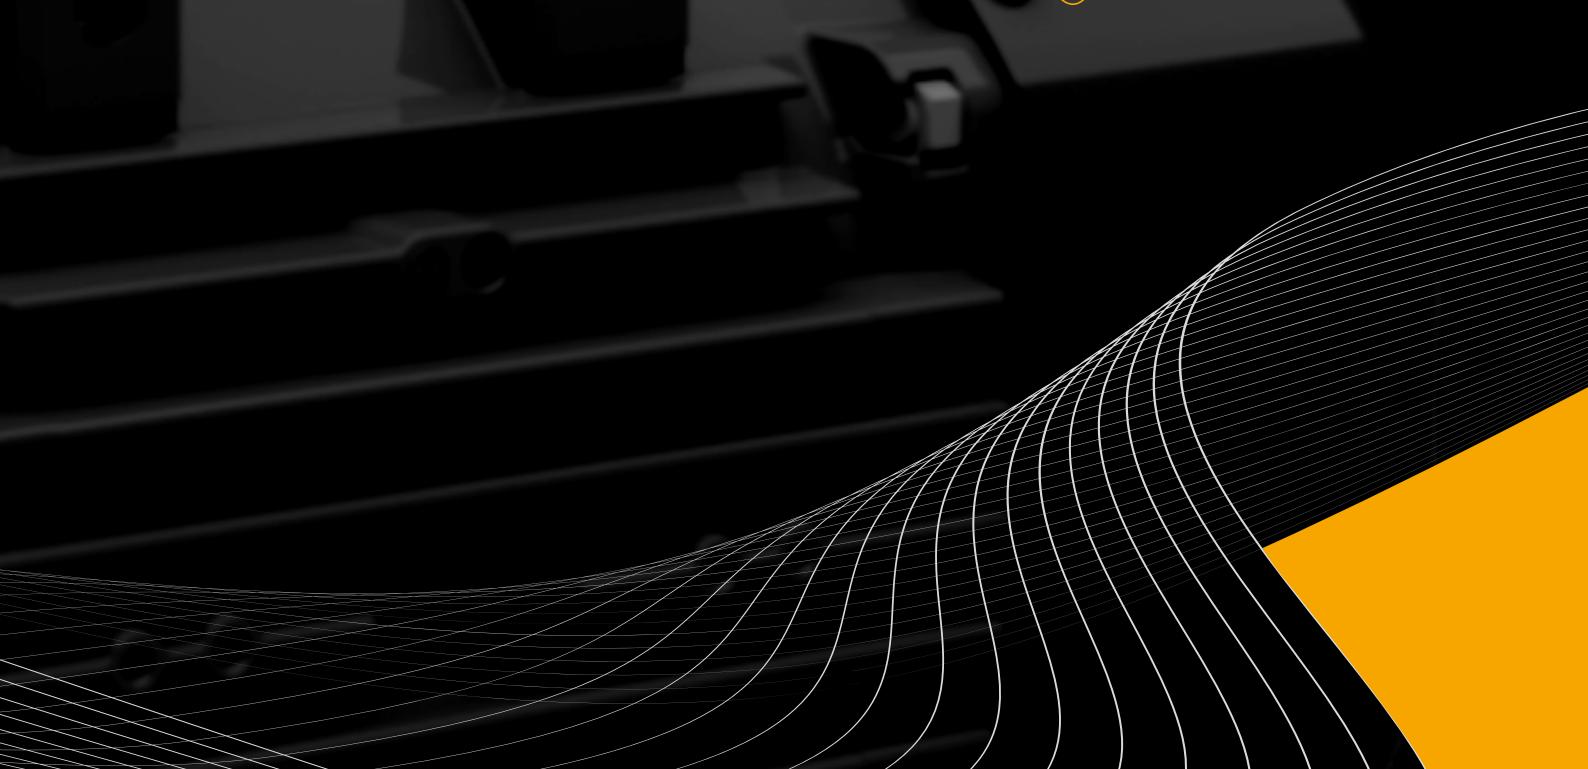

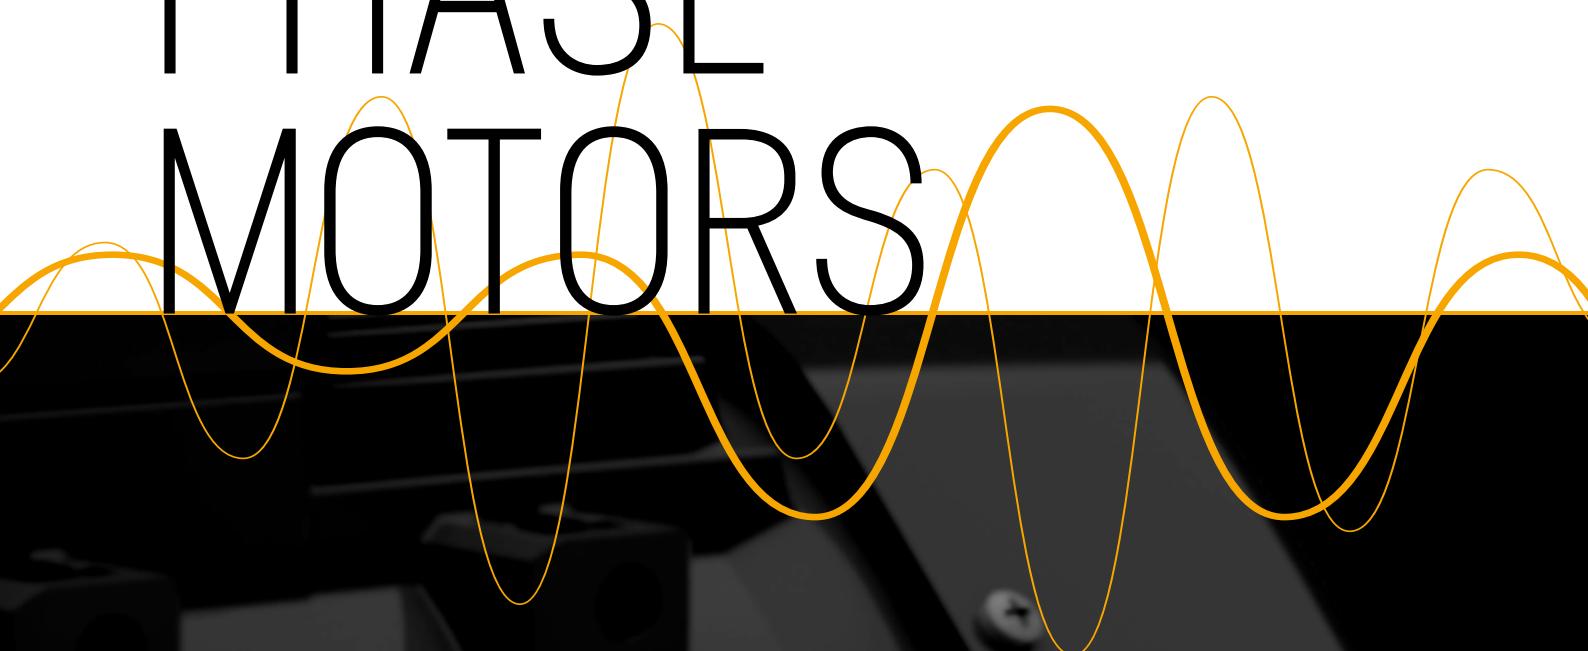

- 11 Efficiency value (acc. to IEC 60034-2-1)
- 12 Load value
- 13 Efficiency value (acc. to IEC 60034-2-1)
- 14 Nominal current
- 15 Power factor
- 16 Motor output power
- 17 Rated speed
- 18 Motor nominal frequency
- 19 Operation voltage
- 20 Production tracing number

* For IE2 and above efficiency (except 315 & 355 frame) motors, SF 1.15 is optional (with temperature rise F) for 315 & 355 frame motors.

INVERTER INTEGRATED MOTORS

TECHNICAL DOCUMENTATION

Our inverter integrated motors are between 0,55-22,0 kW, and they are available from 80 to 200 frames. One of the main advantage of this type is that the motor parameters for inverter are setted and by ourself and there is no effect of cable between inverter and motor that can reduce motors' insulation life.

Motor Power [kW]	0.55	0.75	1.1	1.5	2.2	3	4	5.5	7.5	11	15	18.5	22
Supply voltage [V]	3~400 V [-15%... 480 V [+10%], 50/60 Hz												
Effective nominal current [A] (at 400 V/8 kHz)	1.7	2.3	3.1	4	5.6	7.5	9.5	13	17.8	28.0	34.0	40.0	48.0
Maximum effective current with time [%]	150% for 60 Seconds												
Switching frequency [kHz]	4...8, 16 [factory setting: 8 kHz]												
Rotating field frequency [kHz]	0...400												
Ambient temperature for power rating (°C)	-10 to +40												
Process control	PID controller, freely configurable												
Protective functions	Undervoltage, overvoltage, I _{2t} limitation, short circuits, motor temperature, inverter temperature, stall protection												

High Efficiency
(IE2/IE3 + Inverter)

Perfect matching of
motor and inverter

Solutions for specific
applications

High temperature and
vibration resistance

TECHNICAL SPECIFICATIONS

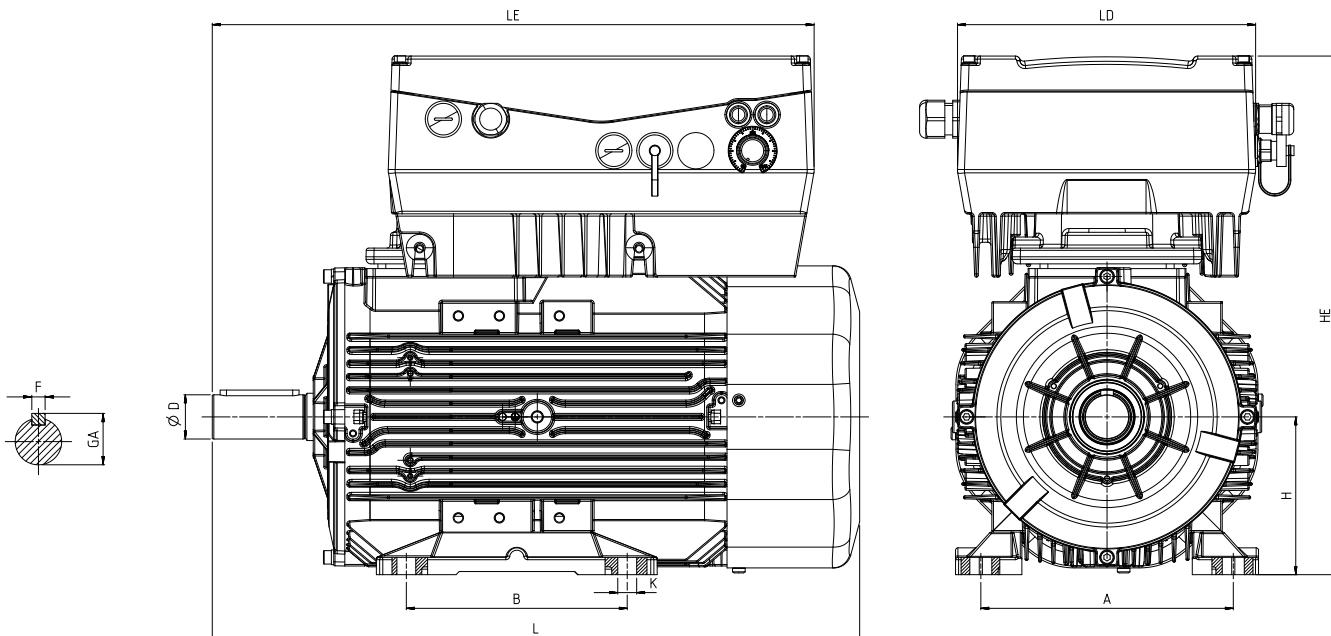

- Perfect combination with IE2 and IE3 motors
- Energy saving function, catch-on-fly function, PID on board
- Standard independence from motor fan
- User friendly MMI (M12 interface on board)
- 24V/100mA (160 mA) switching power supply integrated
- Very high durability through innovative DC bus
- Performance optimized flux reduction
- No power losses in the capacitor
- No aging of the capacitors, thus long-term storage without maintenance possible
- Almost unlimited ripple current persistency
- Less distortion in the power grid (less losses in the EMC filter and rectifier)
- Small construction volume
- Reduced weight
- Very good vibration resistance
- Very low leakage currents (<3.5 mA), thus application on 30m A FI (RCD Type B) possible

PAINTING

Our inverter integrated motors are painted with a black protective paint according to RAL 9005 (black).

BRAKE MOTORS

TECHNICAL DOCUMENTATION

Mechanical and electrical properties are same as standard type motors. Non-drive endshields are made of cast-iron

Brake Specifications

DC electromagnetic brakes with a safety-design are used in brake motors. Different brake voltages are available upon request.

Working Principle

When the supply fails, the springs make the armature plate press the brake disk and then motor automatically starts braking. When the brake being supplied, electromagnet pulls the armature plate then both the brake disk and motor shaft are set to free.

Brake Disk

Asbestos-free brake material is used with long-life friction rings.

Type	Distance between Adjusting-ring and Electromagnet: "A" [in mm]									
	9	8	7	6	5	4	3	2	1	"A"
QB63	-	-	-	0.3	0.1	1.7	2.4	3.1	3.8	4.5
QB71	-	-	-	-	0.8	2.2	3.7	5.1	6.6	8
QB80	-	-	-	-	0.1	3.2	5.4	7.6	9.8	12
QB90	-	-	-	-	-	1.6	5.2	8.8	12.4	16
QB100	3.5	7.0	14.5	14.0	17.5	21.0	24.5	28.0	31.5	35
QB112	-	4.0	11.0	18.0	25.0	32.0	39.0	46.0	53.0	60
	Breaking Torque Value [Kgm]									Max. Torque [Kgm]

Braking Torque

Braking torque can be adjusted by ring. In the table shown below, you will find the distance "A" in order to obtain the braking torque requested. The variation in the wear of friction material which is subject to change in braking torque is given below.

Type	Normal switch-off time ms	Normal switch-on time ms	Fast switch-off time ms
QB63	10	45	20
QB71	15	50	30
QB80	15	55	30
QB90	15	65	40
QB100	20	75	45
QB112	25	180	85

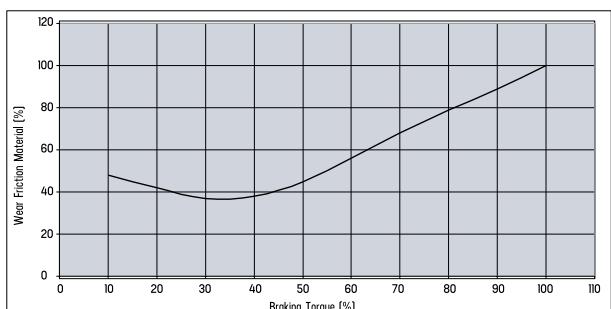

Special Constructions

The following special construction class features are possible upon request;

- Special shaft end
- Special flanges
- Different type bearings
- Fixed bearings
- IP55 protection class
- Different voltages and frequencies
- AC type brake

Air Gap

Ideal air-gap values are given in the table below. The maximum acceptable air-gap value is 0.7 mm. If this value is exceeded, the brake's performance will change and air gap must be adjusted again.

Type	QB630	B71	QB80	QB90	QB100	QB112
Ideal Air-gap [mm]	0.2	0.2	0.2	0.2	0.3	0.3

Rectifier Bridge

Normal Type (AS) half-wave rectifier is used as standard in motors. By using fast type (ASR) rectifier, it is possible to get fast switch on times which is shown on the table.

Normal switching times are given in the table below. These values are subject to change according to load characteristics.

TWO SPEED MOTORS

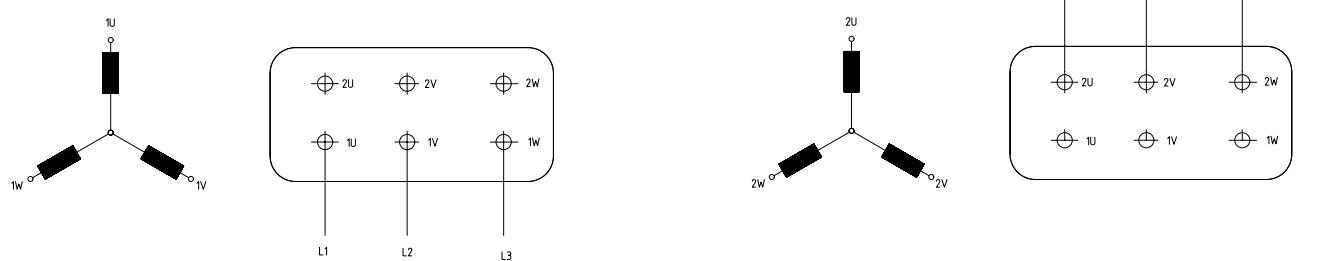

TWO SPEED MOTORS with Dahlender Winding

TECHNICAL DOCUMENTATION

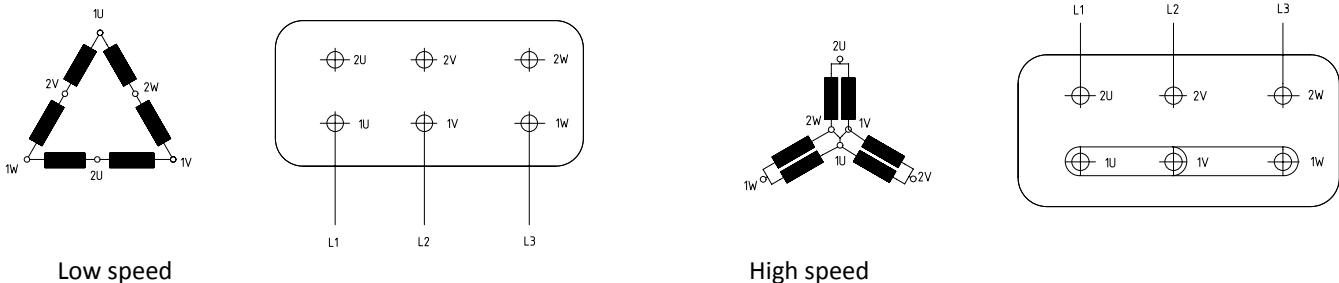

Multi-speed Motors

Multi-speed motors are categorized in two main groups as having “two separate windings” or “Dahlander winding”. In two-separate-winding motors, required speed is obtained with two independent windings with stator. In Dahlander-winding motors, two different speed rating at 2:1 ratio are normally obtained from a single wound motor.

Wiring Diagram for Two-Separate-Winding Motor:

Dahlander Motor Connection Diagram:

Low speed

High speed

(3) Tolerance DIN EN 50347 "j6"

SINGLE PHASE MOTORS

SINGLE PHASE MOTORS

TECHNICAL DOCUMENTATION

Motors are manufactured in IEC 63-100 frame size as single phase, fully closed, short-circuit rotor and fan cooling.

Motors have been designed according to 230V, 50Hz as standard. Motors with other voltage and 60Hz frequency rating can be manufactured on demand.

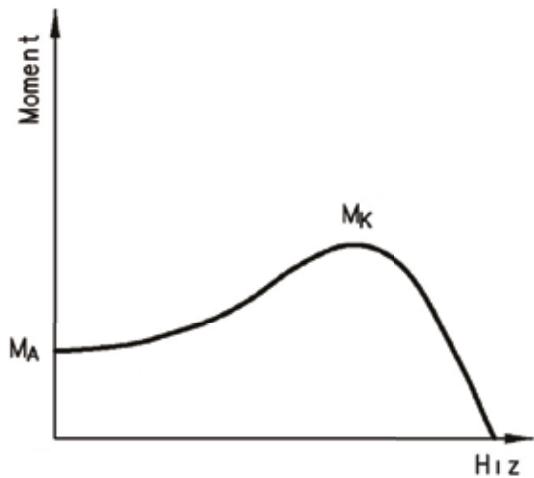

QM type single phase motors are with run capacitors and QC type single phase motors are with start and run capacitors.

QM type motors with run capacitor:

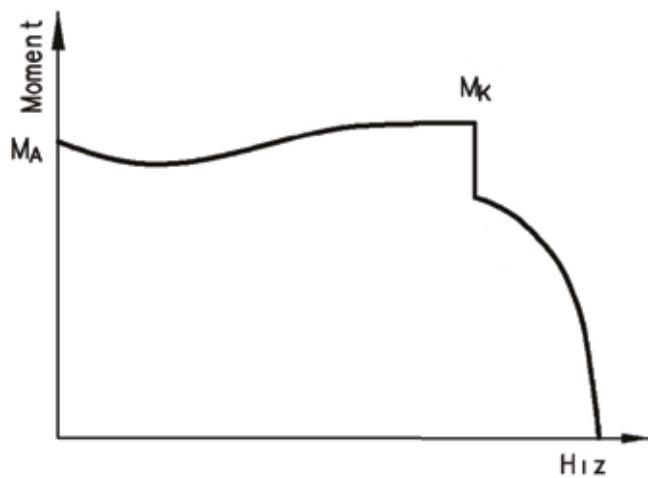

400V run capacitor is used in the motors.

QC type motors with start and run capacitor:

Motors have electronic relay as well as 400V run capacitor and start capacitor. These type of motors with high startup moment have the capability of 300 start/stop per hour. Frequent direction of rotation change, will affect this capability. If you have such an application, please contact with us to get more detailed information. Thanks to current smoothing and rotor blocking protection properties of electronic relay, our single phase motors are guaranteed an extended service life.

Torque-Speed curve of QM type motors with run capacitor

Torque-Speed curve of QC type motors with start and run capacitor

Thanks to the electronic relay, the starting torque (M_A) of QC type motors is 2.5-3 times the nominal torque.

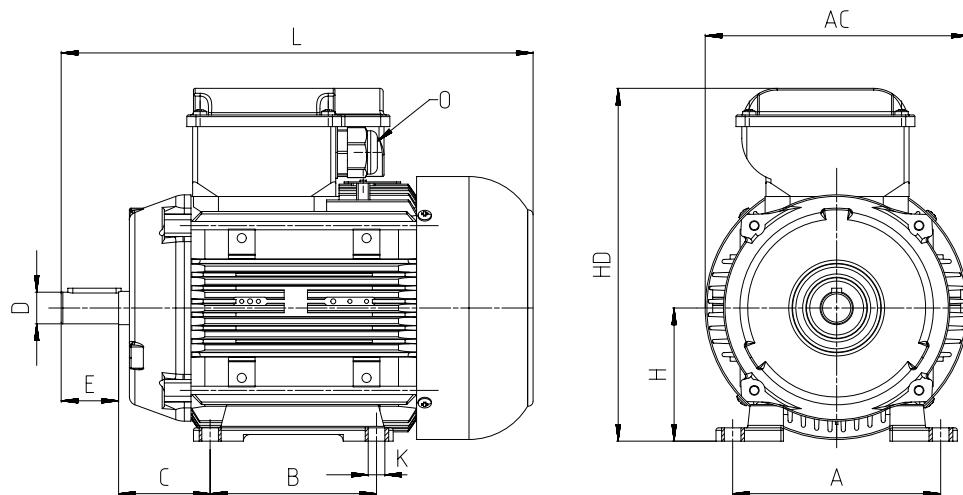

SINGLE PHASE MOTORS with Run Capacitor

SPECIAL MOTORS

SPECIAL MOTORS

DOUBLE VOLTAGE MOTORS

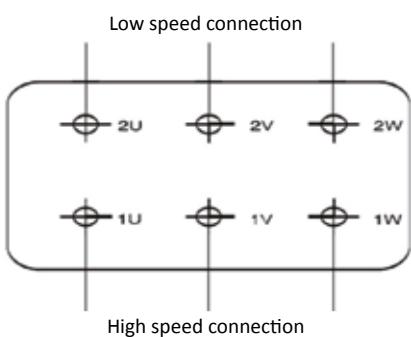

9-lead motors with YY / Y connection and 12-lead motors with Δ /YY/Y connection. Generally designed for 230/460V 60Hz operating values, these motors address different mains voltage needs.

SEPARATE WINDING MOTORS

9-lead motors with YY / Y connection and 12-lead motors with Δ /YY/Y connection. Generally designed for 230/460V 60Hz operating values, these motors address different mains voltage needs.

Q1E112M2/12D 380V 50Hz 4.9/0.8kW 2900/385 d/d

ANTI-CONDENSATION HEATER

Humidity, particularly on motor windings operating in humid environment, reduces insulation resistance and causes shorter motor life. In such applications, with the heaters placed on motor winding, the humidity of windings are removed before starting the motor.

H INSULATION CLASS MOTORS

Our standard motors have Class F insulation. However, we also manufacture motors with Class H insulation.

Ambient Temperature	Winding Temperature Rise Limit	Tolerance
40	125	15
180 °		

UL CERTIFIED MOTORS

We also manufacture UL certified motors upon request.

SPECIAL VOLTAGE MOTORS

Different from standard voltages, we also manufacture motors in different voltage steps (290/500V, 330/570V etc) upon request.

SPECIAL FREQUENCY MOTORS

Different from standard frequencies, we also manufacture motors in different frequencies (32Hz, 87Hz etc) upon request.

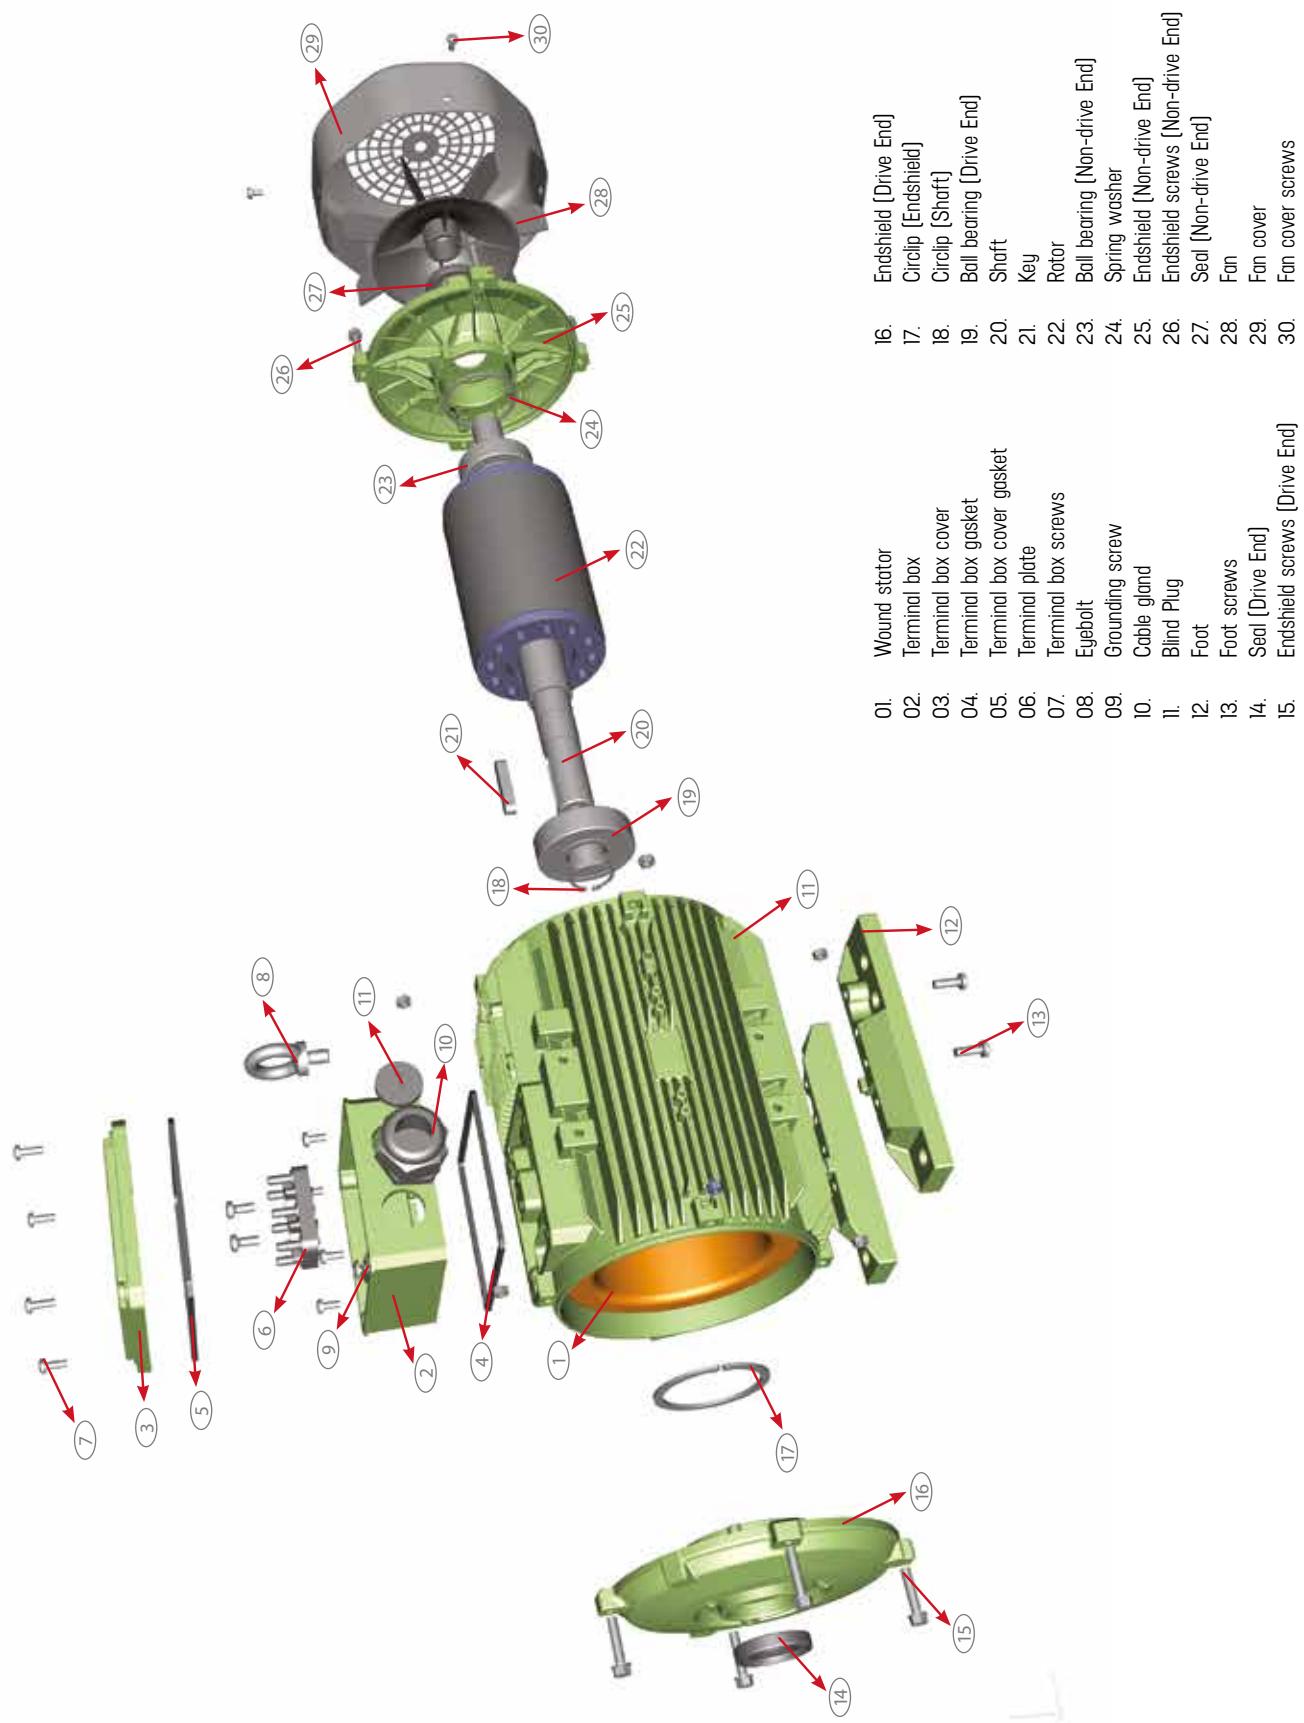

SPECIAL BEARING MOTORS

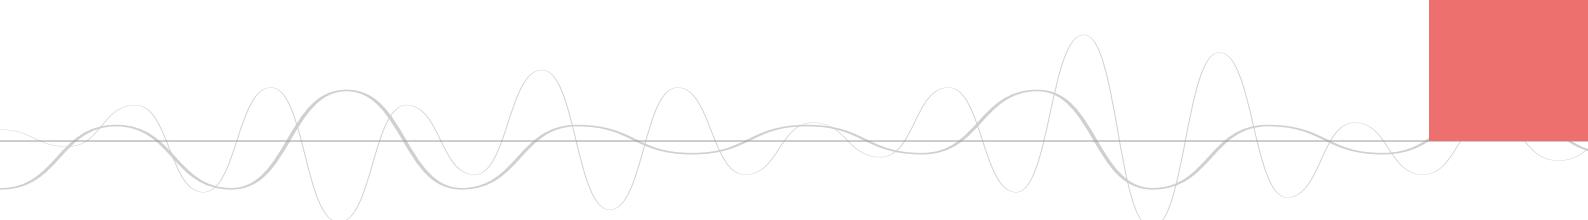

We manufacture motors with bearings that suit to various temperature steps (150°C, 200°C etc) and axial-radial loads for different applications.

OTHER SPECIAL APPLICATIONS

- Special axle or double axle motors
- Special flange motors
- Fixed bearing motors
- Drain hole to remove condensation
- Use of thermic or thermistor to prevent motor winding temperature from rising above limit values
- Inverter duty motors
